AREC NAS VOD

Video-on-Demand

AREC NAS VOD is a simple and convenient video content sharing solution for your organization. Its primary function is to let users store, manage, and share all videos recorded by AREC Media Stations via the software interface in just a couple of clicks. The system supports account management, video information post-editing, lecture/meeting materials uploading, and a built-in video player that lets users switch video sources at will, jump to bookmarks, and more.

AREC NAS VOD does not contain unnecessary advertising and delivers a high-quality VOD experience without major investments. It can be installed on the most popular NAS brands, Synology and QNAP, and only requires a one-time set up fee.

Automatic Backup

AREC NAS VOD System

A Secure "Internal Youtube"

AREC NAS VOD lets users automatically upload videos made by AREC Media Stations, store, edit, and manage them, all via a centralized video library.

Make Video Content Management Easy

AREC NAS VOD comes with two distinct features that simplify user experience. Video Administrator Account is used for management of video content. Video Portal and Player is used to watch and download lecture/meeting materials. With AREC NAS VOD, it becomes easy for institutions to provide video learning, knowledge sharing, or corporate online training services.
